

Transform your
career with
**Transdisciplinary
Learning at UTS**

TD School

Discover the frontier of transdisciplinary learning and reimagine your practice.

The Transdisciplinary Learning program provides academics, educators and learning professionals with new ways of thinking to shape opportunities and create meaningful change within their own professional setting.

Taking a creative inquiry-driven approach, the program is designed to educate people for a rapidly changing, uncertain and networked world.

You'll work in highly collaborative teams across different disciplines and professions and benefit from interactions with other researchers and professionals whose expertise will challenge and complement your own.

Curating a versatile toolkit for designing future-oriented learning – whether that's in higher education, an organisation, a community or with young people in schools – is one valued outcome from these studies.

Graduate Certificate in Transdisciplinary Learning

Duration: 1 year, 24 credit points

Dr Tanja Golja, Course Director
Tanja.Golja@uts.edu.au

“ The organisation I'm currently working for needs to rapidly shift its learning capability and I wanted to be ready for, and help direct, that shift. The course has been great because my learnings have been immediately applicable to my job. The culture of the course was inspiring and I've made new connections with incredible people. My most valuable take away is a deeper understanding of collective learning and how it can be cultivated through learning design. ”

Janet Okaro
